SEISMIC BRACING FOR FIRE SPRINKLERS

This one day seminar will provide a balance of basic and advanced information regarding seismic bracing requirements for Fire Sprinkler Systems. The basic information describes the responsibility of the contractor and authority having jurisdiction for the proper installation of earthquake protection of fire sprinkler systems. The advanced information will be most helpful for those personnel responsible for the layout of seismic protection and those responsible for plan approval and inspection of seismic installations.

This one day seminar is intended to provide information ranging from the basic to advanced level.

WHO SHOULD ATTEND?

This program is most beneficial to contractors, Designers, architects, engineers, building officials, Fire service, and insurance authorities who are responsible for the design, installation, review, and inspection of seismic bracing requirements for Automatic Fire Sprinkler Systems.

TOPICS COVERED

-The goal of this class is to familiarize participants with the rules for earthquake design in NFPA 13.
-Review of the seismic bracing requirements per NFPA 13 including;

- Sway Bracing
- Lateral Sway Bracing
- Longitudinal Sway Bracing
- Horizontal Seismic Loads
- Restraint of Branch Lines
- Hangers and Fasteners Subject to Earthquakes

When: Wednesday October 27, 2010

City: Halifax

Location: TBD

Time: 8:00am to 5:00pm

Fee: \$275 per person

15% Discount when you register three people

Includes work book, continental breakfast, morning and afternoon coffee break

Recommended to bring a copy of NFPA 13
